The STOP Program

Smoking Treatment for Ontario Patients (STOP)

A partnership with CAMH and public health to implement a smoking cessation program offered to Ontario patients. The STOP program is funded by the Ministry of Health of Ontario, and delivers up to 26 weeks of Nicotine Replacement Therapy (NRT), free of charge.

NICOTINE

Nicotine is a highly **addictive ingredient in tobacco** and most vape products. Nicotine contributes to a person's physical dependence on tobacco or vape products.

What Does Public Health Offer?

The Leeds, Grenville, and Lanark District Health Unit offers free **tobacco and vaping cessation counseling** with trained cessation providers. Nicotine Replacement Therapy as appropriate coupled with counseling, doubles the chance of a successful cessation attempt.

NICOTINE REPLACEMENT THERAPY PRODUCTS AND HOW TO USE THEM

**Before using these products, read the product labels and speak to your health care provider or pharmacist about whether these products are right for you.*

PATCH

The patch is a small piece of material that sticks to your skin and slowly releases nicotine in the bloodstream. The patch **reduces withdrawal symptoms** associated with quitting nicotine products like tobacco or vaping.

- Place patch on a dry area of skin above the waist and below the neck
- Touch only a small corner of the sticky back of the patch
- Use a different area of skin to apply patch daily
- Remove old patch prior to applying new one
- Do not use lotion or moisturizing soap on area the patch is applied, this may interfere with the adhesive
- If the patch interrupts sleep, it can be removed at night
- Fold used patches in half and discard old patch out of reach of children and animals

WARNING: nausea, vomiting, headache, dizziness, cold sweats, tremors, confusion, and muscle weakness may indicate nicotine overdose, if this occurs remove the patch and seek medical attention

GUM

A **short-acting** form of NRT used for **cravings**. The nicotine is absorbed through the lining of the mouth.

- Chew the gum slowly until the taste becomes strong.
- When the taste is strong, rest the gum between your jaw and cheek. The nicotine is absorbed by your mouth's lining.
- After the taste has faded, resume chewing the gum until the taste becomes strong again.
- Keep repeating steps 2 and 3 for about 30 minutes.

***maximum 20 pieces per day.**

LOZENGE

A **short-acting** form of NRT used for **cravings**. The nicotine is absorbed through the lining of the mouth.

- Place the nicotine lozenge in your mouth.
- Occasionally move the lozenge from one side of your mouth to the other. Do not chew or swallow the lozenge.
- Repeat step 2 until the lozenge dissolves completely (about 10 minutes).

***maximum 20 pieces per day.**

INHALER

The inhaler is another form of **short-acting** NRT that is used for **cravings**. Nicotine from the inhaler is absorbed through the mouth, throat, and upper respiratory tract.

- Line up the markers and pull at each end in the opposite direction.
- Insert the cartridge into the mouthpiece and twist to close securely.
- Bring mouthpiece to your mouth and inhale deeply to the back of your throat or puff in short breaths. Each cartridge last about 20 minutes of frequent puffing.

***Maximum 12 cartridges a day.**
